

## **AddOn – aluminium compound sash for added value**

The “AddOn” aluminium compound sash from profine Group is an innovative KBE, Kömmerling, and Trocal brand solution for enhancing the functional value and individual design of windows.

“AddOn” boasts improved thermal and sound insulation values in addition to the option of an integrated shutter system and sunshade.

“The compound sash is fitted on the outside and acts as an additional glass pane, enhancing the window’s functional properties. Furthermore, a shutter and sunshade element can be fitted between the compound and insulating glazing for better protection against the weather,” explained Norbert Wenz, Project Manager at profine.

The “AddOn” aluminium compound sash is easily fitted on existing windows, making it ideal for both new buildings and renovation work. A separate box is not needed for the shutter system.

The innovative aluminium compound sash is offered by the KBE, Kömmerling, and Trocal brands in conjunction with their 88 mm systems.

Norbert Wenz: “AddOn gives our customers a whole new field of design possibilities. For instance, they can choose an unlimited range of colours for the outer aluminium cover as well as finishing techniques, and this without sacrifice to the classical advantages of PVC-U windows. A successful synthesis of design and cost effectiveness.”

## **Aluminium element coupling profile**

profine has adopted in its 88 mm brand programmes a further innovative solution in the form of a new aluminium element coupling. This is ideal for greater requirements on coupling properties and expansion compensation.

The aluminium element coupling can be installed on the building substrate and can take various steel inserts for a range of  $l_w$  values with the same sight line.

It is available in white, anodised, and semimachined versions and is ideal for use with aluminium cover elements.
