

PRESS RELEASE

profine – New technology for dry bonding

profine Group has developed an innovative bonding adapter technology that will allow its manufacturers to apply dry bonding efficiently and cost effectively.

This exchangeable, system tested adapter strip for “Pos. 1” bonding features an integrated adhesive tape from Lohmann and a PCE sealing lip as a water and dust barrier. Window makers can introduce the profiles to their standard procedures.

Their machinery therefore does not need additional investments – compared to bonding with liquid adhesive. And manufacturers that apply bonding technology only infrequently are saved the times and costs of a special production line.

“The bonding adapter allows our customers to benefit easily and cost effectively from the many advantages of bonding technology. The greatest advantage of all is the enhanced thermal insulation by the left off steel reinforcement,” explained Norbert Wenz, Product Manager at profine.

Bonded completely, the pane additionally improves protection against forced entry and the static properties. Even without steel, white window elements can be manufactured with the same heights as their steel reinforced versions.

The new bonding adapter can be applied to all sashes of the Kömmerling 88plus profile series. It can be supplied with a black or light grey gasket and combined with 22–52 mm glazing.
