

New extranet for partner companies

profine Group has completely revised its extranet, the access-protected internet area for its partner companies. The comprehensive range of information on all topics relating to the products of the system provider is now integrated directly into the web pages of the brands KBE, KÖMMERLING and TROCAL - after login on the homepages.

"With the relaunch, we now offer window manufacturers and architects all the information on a single platform, depending on the target group. We had previously examined the use of the extranet and added new features to the proven features as well as optimized functions", explains Marc Habermeyer, Head of Marketing & Brands at profine.

Thus, for example, all product-specific documents, such as test certificates or system manuals, can be found directly with the corresponding product on its page in the menu.

Also new is the so-called document finder, an easy-to-use search function, with which the desired documents can be found both via the document type as well as via the respective product.

Likewise, a download cart now offers a clear workflow when it comes to quickly and easily accessing a whole series of documents and sending them.

In the menu "Service", architects and processors will find all the services of the system provider profine at a glance - from the calculation of the statics to the order of a brochure portfolio up to the e-shop.

With their integration into the brand pages, the bilingual extranet pages offer a useful additional benefit as well as a modern user experience. This is rounded off by responsive design, graphically adapted to different devices such as smartphone, tablet or PC.
