TODAY FOR TOMORROW

VENTILATION WITH THE FEEL GOOD FACTOR

Kömmerling 76 double seal

REGEL-air®

SYSTEMATIC SUPPLY OF FRESH AIR

Kömmerling 76 double seal
REGEL-air®

The better the insulation, the more important the regular supply of fresh air. The balance is crucial: Regular ventilation prevents a moist indoor climate and thus the risk of mould growth. At the same time, it is important to minimise heat loss. Our REGEL-air 76 ventilation solution creates this supply of fresh air fully automatically – and you can breathe easy!

AUTOMATIC

- › Works without electricity
- › Innovative return spring
- › Fully automated ventilation
- › 2-stage wind pressure regulation

FLEXIBLE

- › Can be installed both horizontally and vertically
- › Used in the outer frame rebate – therefore invisible when the window is closed
- › Easy to retrofit
- › Ideal also for rarely used rooms (holiday flats, weekend homes)

SUSTAINABLE

- › For healthy indoor air with closed windows
- › Minimum heat loss for optimum energy balance
- › Protects the fabric of the building

EFFECTIVE

- › Continuous, even supply of fresh air
- › Minimises high air humidity and the risk of mould
- › Ventilation as per DIN 1946-6 and DIN 18017-3

USER-FRIENDLY

- › Easy to clean
- › Tested sound insulation up to 43 dB (STC 4)
- › Tightness against driving rain and passage of air as per DIN and EU standards
