

Kömmerling®

TODAY FOR TOMORROW

PERFECT DESIGN AND THERMAL INSULATION

**Kömmerling K-Vision
double seal system**

THE BEST OF BOTH WORLDS

Kömmerring K-Vision double seal system

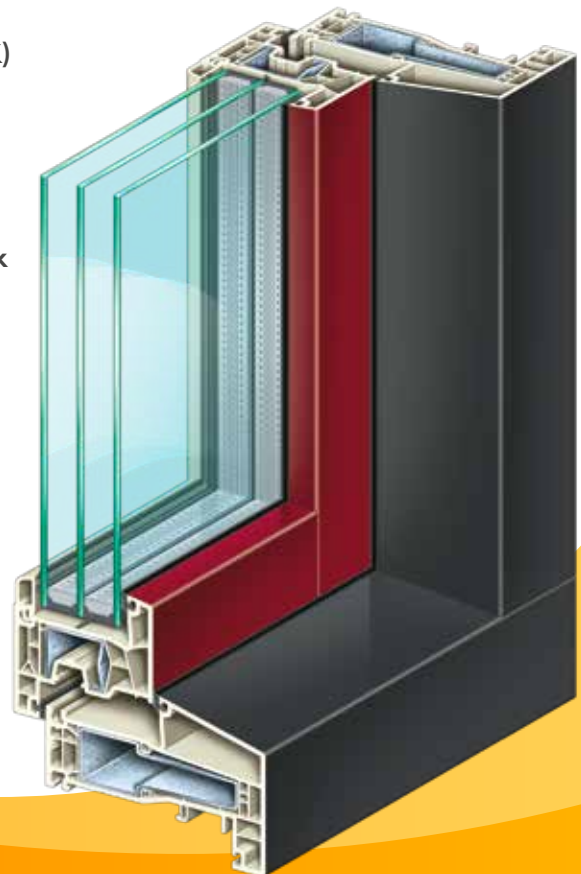

PERFECT INTERACTION

The Kömmerring K-Vision 76 design can take modern triple or special functional glazing up to 48 mm thick for large energy savings. In addition, the unique innovative surface technology proCoverTec makes every window an architectural highlight.

Based on the successful systems K-Vision and Kömmerring 76, Kömmerring K-Vision 76 is a double seal system developed specifically for the Dutch windows sector. With impressive thermal insulation, a convincing design, and many intelligent and unique features, Kömmerring K-Vision 76 fascinates all along the line.

Kömmerring K-Vision combines the usual market look with a 15° leg bevel in the frame and outstanding U_f values from 1.4 W/(m²K) in the standard version to 1.0 W/(m²K) in the thermo steel variant. Design variants like the cube shaped K-Vision Cube or the wooden window look fulfil the design and aesthetics requirements of both today and specifically the future.

- High cost and energy savings due to 5-chamber technology: U_f value from 1.4 to 1.0 W/(m²K)
- Construction depth 120 mm (frame) or 76 mm (sash)
- Glazing from 16-48 mm possible
- K-Vision Cube: Unique shape with high stability
- Alternative exterior appearance: Wooden window look
- Historic sliding sash design: City window
- proCoverTec: Innovative surface technology
