

New: Kömmerling „88plus“ Residential Door System

When its residential door system from the product range "88plus" premiered at the fensterbau/frontale, Kömmerling, the brand with a tradition within profine Group, placed new emphases with regard to flexibility, design and function.

The new 5 chamber system with a constructional depth of 88 mm is available with an inward and an outward opening sash. For inward opening doors, a U_f value of 1.1 and for outward opening doors 1.2 $W/(m^2K)$ are achieved, first class values for residential doors.

"The new '88plus' door stands out due to its excellent thermal insulation and load bearing properties. That is why we could persuade our customers of the new system at Nuremberg", states Frank Suthoff, Head of the Product Management of the Kömmerling brand within profine Group.

The "88plus" residential door allows the use of functional glazing types and door panels from 22 up to 54 mm. In addition, Georgian bar sashes in two different widths are available. An aluminium weather bar combined with a thermally separated threshold offers high protection against driving rain and the two continuous sealing levels provide improved tightness.

Furthermore, the premium system includes weldable corner connectors as well as a big dimension steel reinforcement providing static resistance and torsional stiffness. Single-sash residential doors of 1.20 m x 2.40 m and French casement doors with sash dimensions of 1.0 and 2.40 m can be manufactured.

The different decor options, i.e. plain colours and wood-grain films, allow a large variety of design options. Speaking of decor, the range is complemented by an aluminium cladding for inward opening doors.

Frank Suthoff: "Since its market launch, we have extended "88plus" to a complete system. With the new residential doors, we want to give a clear signal. They combine energy efficiency with attractive design and we consider them to become the standard system for the future."
