

PRESS RELEASE

Cooperation with horizAL for certified antifall devices

The company horizAL is considered to be Europe's leading manufacturer of aluminium railing systems. In cooperation with profine, all the common window systems of this system provider were tested and have now been certified for compliance with the supervising authority's requirements for installations on PVC-U windows.

The manufacturers of the KBE, Kömmerling, and Trocal brands can now make use of prefabricated railing systems that eliminate the window maker's liability.

This is a result of the growing demand for ground level windows. The state building regulations stipulate the attachment of antifall elements for low panel heights and ground level window elements. Window makers are increasingly attaching these antifall devices directly to the window frame.
